PROYECTOS PROJECTS

La gestión de proyectos es la aplicación de conocimientos, habilidades, herramientas y técnicas a las actividades de un proyecto para satisfacer los requisitos del mismo. Consiste en reunir varias ideas para llevarlas a cabo, y es un emprendimiento que tiene lugar durante un tiempo limitado, y que apunta a lograr un resultado único. Surge como respuesta a una necesidad, acorde con la visión de la organización, aunque ésta puede desviarse en función del interés. El proyecto finaliza cuando se obtiene el resultado deseado.

Project management is the application of knowledge, skills, tools and techniques to the activities of a project to satisfy its requirements. It consists of gathering various ideas to carry them out, and it is an undertaking that takes place over a period of time, limited, and aiming to achieve a unique result. It arises as a response to a need, in accordance with the vision of the organization, although it may deviate based on interest. The project ends when the desired result is obtained, and can be said to collapse when the initial need disappears or available resources are exhausted.
